DEEP LEARNING MODULE

Workshop 2

This workshop aims make sure you understand the Perceptron and its code.

1. Download the code, run it and make sure you understand it.

2. We used the "AND" truth table in the lecture to illustrate the Perceptron. Try a different example, such as "OR". What happens if you try "XOR"?

3. The Learning rate is an important parameter. Experiment with a range of learning rates, from a small value to a larger value and see what happens to the rate at it which it converges.

   Hint: You might want to write a while or for-loop, record the answers and use matplot.pyplot to display.
